South East London

AVAILABILITY

Immediate — no notice period. London hybrid or UK remote.

SKILLS

Product design
End-to-end service journeys · Interaction design · Prototyping in Figma · Design systems & pattern libraries · Responsive web · Native iOS & Android

Evidence-based design
Usability testing · Qual & quant research · A/B & analytics · Success criteria & validation · Stakeholder negotiation

Designing for trust
Design inside regulatory constraint · Consumer Duty & vulnerable customers · Accessible design (WCAG checks) · Behaviour change · Designing for machine learning output

Ways of working
Multidisciplinary agile teams · Cross-channel service diagnosis · Roadmap definition · Internal tooling · Building design functions

EDUCATION

BA (Hons) Art & Design, 2:1
University of Bradford

INTERESTS

Track cycling at Herne Hill Velodrome · Running · Vegan cooking · Walking a springer spaniel

PROFILE

Twenty-five years in digital design, nine of them at Lloyds Banking Group, where everything I worked on sat inside regulation, risk and legacy systems. I design for services where people have to trust what they are being shown, from savings and investment products to a machine learning forecast for expert colleagues. I work in multidisciplinary teams and argue from evidence. When pilot data showed a screen wasn't earning its place, I cut it.

CAREER

Lloyds Banking Group

2017 – 2026

Interaction Designer (2017–2022) → Product Designer (2022–2026)

Nine years across five phases, working in multidisciplinary teams on regulated consumer services, across native app and web.

New propositions — discovery and design direction

2023 – 2026

- **Argued the design boundary was drawn in the wrong place.** The default scope was the app; I took in advertising, web, app, email, in-app promotions, benefits, print, letters and the debit card. Mapped from live production assets rather than concepts, so every team could find its own work in it.
- **Diagnosed the confusion as structural, not screen-level:** four overlapping stories about what the product was and who it was for.
- **Turned the diagnosis into a funded roadmap.** Twenty-one quantified opportunities became a backlog and set the following year's roadmap.
- **Authored the design brief and behaviour-change strategy** for helping well over a million cash-heavy savers take a confident first step into investing.
- **Coached designers across teams I didn't own** as the function grew several times over.

Savings and investment products — design and delivery

2022 – 2023

- **Argued my own launched work out of existence.** The majority of pilot interactions landed on a single snapshot tile, so I merged the hub and the snapshot into one view and removed a screen from the journey.
- **Opened a premium-tier product to every customer.** Used research evidence to challenge the original brief and negotiate with senior stakeholders. Now used by millions across the Lloyds app.
- Designed the save and invest space and its calculator, a financial planning hub, savings goals and net worth features, across native app and web, with WCAG checks and accessibility review on the app and web work.

Run-ahead design team

2021 – 2022

- **Made spending insights work without asking customers to do anything.** Defined the zero-setup transaction categorisation system behind the feature and set the roadmap that carried it from concept to product. Live for millions of current account customers across Lloyds, Halifax and Bank of Scotland.
- **Ran testing on proactive financial messaging, recruiting customers who identified as financially struggling.** People welcome a bank being proactive but reject being told what to do with their money. The fix was the system's stance, not its tone.

Next-generation banking app

2020 – 2021

- **Designed a customer-centred banking vision** on a cloud-native core banking platform: one profile, one unified view, past, present and future finances connected. Figma prototyping and customer journey design, working directly with developers.

Enterprise design team

2017 – 2020

- **Designed colleague tooling against a regulatory obligation.** Built voice-to-text transcription journeys so contact centre colleagues could meet regulatory requirements on call review. The team found that recognition errors clustered unevenly across speakers, which highlighted a need to address the product's performance.
- **Ran third-party biometrics trials** that exposed identity-verification weaknesses before wider rollout, changing what the bank rolled out.
- **Put a machine learning model in front of expert users and made it trustworthy.** Designed a savings forecasting dashboard for the bank's savings team, replacing spreadsheets with an output they could act on.

Moonpig.com

2008 – 2017

Head of User Experience Design (2012–2017) · Web Design & Performance Manager (2008–2012)

- **Built a design and research function from nothing**: a multidisciplinary team of designers, researchers and A/B testers on high-traffic web and app products.
- **Introduced qualitative and quantitative research**, so design proposals were settled on findings rather than seniority.
- **Held quality steady while the team and product range grew.** Developed design principles, interaction pattern libraries and critique processes.
- **Shipped the company's first mobile app and card customisation interface.**

Earlier career

1997 – 2008

- **Freelance Designer & Developer (2003–2008).** Design and front-end development for Moonpig, Lionsgate UK and Sonic Arts Network, with projects recognised by the New Statesman New Media Awards and Yahoo! Find of the Year (2006).
- **Hallmark Global Mobile, Senior Designer → Designer (1999–2003)** and **Toucan Europe, Web & Multimedia Designer (1997–1999).**
